4.multiple divs side by side in component

```
src > components > JS ExpenseItem.js > ⊙ ExpenseItem
  1    function ExpenseItem(){
  2        return (
  3 💡          <div>Date</div> <div> <h2>Title</h2> <div>Amount</div> </div>
  4        );
  5    }
  6
  7    export default ExpenseItem;
```

-

- `<div>Date</div> <div> <h2>Title</h2> <div>Amount</div> </div>`

-
  - Here we have a div and another divs side by side which means here we have two root elements(one is div for date and another div for title and amount)
  - But JSX allows only one root elements to be returned
  - To overcome this error, we must enclose the entire elements in a div
    - `<div> <div>Date</div> <div> <h2>Title</h2> <div>Amount</div> </div> </div>`
    - Now js allows this because on total it has only one root element which has several divs enclosed in it

```
src > components > JS ExpenseItem.js > ⊙ ExpenseItem
  1    function ExpenseItem() {
  2        return (
  3 💡      <div>
  4            <div>Date</div>
  5            <div>
  6                <h2>Title</h2>
  7                <div>Amount</div>
  8            </div>
  9        </div>
 10        );
 11    }
 12
 13    export default ExpenseItem;
 14
```
