3. First custom component

```
src > components > JS Expenseltem.js > [∅] default
  1    function ExpenseItem(){
  2        return <h2>My first component</h2>;
  3    }
  4
  5    export default ExpenseItem;
```

-
  - For our custom components camel case our names

```
 1    import ExpenseItem from "./components/ExpenseItem";
 2
 3    function App() {
 4      return (
 5        <div>
 6          <h2>Let's get started!</h2>
 7          💡    <ExpenseItem></ExpenseItem>
 8        </div>
 9      );
10    }
11
12    export default App;
```

-
  - Here react decides whether it is default html element or custom element only by checking the first letter of the component(upercase-custom, lowercase-default)

```
src > JS index.js
 1    import ReactDOM from 'react-dom';
 2
 3    import './index.css';
 4    import App from './App';
 5    💡
 6    ReactDOM.render(<App />, document.getElementById('root'));
```

-
  ← → C ⓘ localhost:3000

  ## Let's get started!

  ## My first component

-
