5. CSS in react components
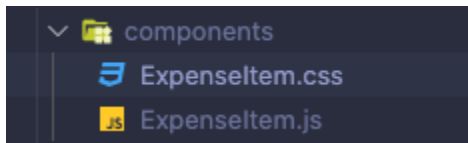

-

- ```js
  src > components > Js ExpenseItem.js > ...
  1    import './ExpenseItem.css';
  2
  3    function ExpenseItem() {
  4      return (
  5        <div className='expense-item'>
  6          <div>March 28th 2022</div>
  7          <div className='expense-item__description'>
  8            <h2>Current Bill</h2>
  9            <div className='expense-item__price'>$432</div>
  10         </div>
  11       </div>
  12     );
  13   }
  14
  15   export default ExpenseItem;
  16
  ```

- ```js
  src > components > Js ExpenseItem.js > ⊘ ExpenseItem
  1    import './ExpenseItem.css';
  2
  3    function ExpenseItem() {
  4      return (
  5        <div className='expense-item'>
  6          <div>March 28th 2022</div>
  7          <div className='expense-item__description'>
  8            <h2>Current Bill</h2>
  9            <div className='expense-item__price'>$432</div>
  10         </div>
  11       </div>
  12     );
  13   }
  14
  15   export default ExpenseItem;
  ```

  - Here in JSX, we have used className instead of class because in javascript 'class' is a reserved keyword

-
