9.Eventlisteners in React

```js
function ExpenseItem(props) {
    // const expenseDate=new Date(2023, 7, 30);
    // const expenseItem='House Rent';
    // const expenseAmount=250.00;
    const onClickHandler= () =>{
        console.log("hello");
    }

    return (
        <Card className='expense-item'>
            <ExpenseDate date={props.date}>
                <p>hello</p>
            </ExpenseDate>
            <div className='expense-item__description'>
                <h2>{props.title}</h2>
                <div className='expense-item__price'>${props.amount}</div>
            </div>
            <button onClick={onClickHandler} >Click Me</button>
        </Card>
    );
}
```

-
- Here on line 22, the button onclick we have just specified the name of function
- We should not call that function using (), we should only specify the name.
